JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Sanitary report from Santiago.

SANTIAGO DE CUBA, *October 2, 1897.*

SIR: I have the honor of submitting the following report on the sanitary condition of Santiago de Cuba for the week ended October 2:

Fifty-five deaths have been reported, of which 10 were from yellow fever, 3 from enteritis, 1 from dysentery, 4 from tuberculosis, 2 from typhoid, and 3 from pernicious fevers, and 7 from remittent fevers; the rest from noncontagious diseases.

There are 97 cases of yellow fever at the military hospital, and 982 from all kinds of diseases, malarial fevers and tuberculosis predominating. The temperature is cooler and the general health of the inhabitants has become much better.

Respectfully,

DR. H. S. CAMINERO,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

JAPAN.

Sanitary report from Yokohama.

YOKOHAMA, *September 23, 1897.*

SIR: I have the honor to inclose my regular report of infectious disease in Japan for period September 3 to September 22, inclusive. Large as is the aggregate of dysentery shown by it, I am glad to say that, since the beginning of cooler weather, within the last ten days the disease seems to be declining in severity.

The cases of cholera, reported from Tokyo only, are, as heretofore during this season, of doubtful genuineness.

I am, sir, very respectfully, your obedient servant,

STUART ELDRIDGE,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

[Inclosure.]

Report of infectious disease in Japan, September 3 to September 22, 1897.
